New Horizons: From Research Paper to Pluto

Tavner P
2015

NASA's New Horizons mission, part of the New Frontiers Program, is expected to reach its primary target - the dwarf planet Pluto - on July 14 2015. Mendeley was invited to visit NASA during the close approach of Pluto and will be at NASA HQ on the day of the encounter. This report was written to mark the occasion and to share our excitement at being present for the event.

The screenshot shows the Mendeley web interface. At the top, there's a navigation bar with tabs: Dashboard, My Library (which is selected), Papers, Groups, and People. Below the navigation is a search bar with placeholder text "Search papers..." and a "Advanced search" link. The main content area is titled "Papers". It displays a list of research papers. The first item in the list is a blue card for a paper titled "How To Choose a Good Scientific Problem" by Uri Alon, published in "Molecular Cell" (2009). The card includes a snippet of the text: "Choosing good problems is essential for being a good scientist. But what is a good problem, and how do you choose one? The subject is not usually discussed explicitly within our profession. Scientists are expected to be smart enough to figure it out...". At the bottom right of the card, it says "58,274 readers".

Journal: *Genome Research*

Year: 2010

Volume: 20

Issue: 4

Pages: 413-427

Abstract:
Global studies of transcript structure and abundance in cancer cells enable the systematic discovery of aberrations that contribute to carcinogenesis, including gene fusions, alternative splice isoforms, and somatic mutations. We developed a systematic approach to characterize the spectrum of cancer-associated mRNA alterations through integration of transcriptomic and structural genomic data, and we applied this approach to generate new insights into melanoma biology. Using paired-end massively parallel sequencing of cDNA (RNA-seq) together with analyses of high-resolution chromosomal copy number data, we identified 11 novel melanoma gen...

My Library New Horizons: From Res...

New Horizons

The New Horizons mission received approval in November 2001⁶. Its objective was to send a spacecraft to Pluto - the only unexplored planet (still recognized as a planet at that time) in the solar system. Previous missions intended to reach Pluto - including *Pluto Fast Flyby* and *Pluto Kuiper Express* - had been cancelled, but after a thorough new profile selection process, NASA committed to launching *New Horizons* as part of its New Frontiers program.

Due to the distances involved - New Horizons would have to cover nearly three billion miles to reach its objective - the craft was designed to have as little mass as possible, but would be launched using the huge Atlas V expendable launch system. This guaranteed the greatest possible velocity for the craft.

When the mission launched on 19 January 2006, the probe left Earth on a solar system escape trajectory travelling at nearly 37,000 mph. It crossed the Moon's orbit just eight hours and thirty-five minutes after lift-off, and reached that of Mars only 78 days later. The probe gained a gravity boost from the gas giant Jupiter to accelerate past 51,000 mph, but would still have over eight years to travel to its objective. New Horizons is expected to make its closest approach of Pluto and its moons on July 14, 2015⁶.

Phoning Home

Communicating with a probe three billion miles from Earth poses a number of challenges for the New Horizons team. Luckily, they can rely on NASA's Deep Space Network

1. Radioisotope Thermoelectric Generator (RTG)
Provides electrical power produced using the decay of plutonium-238 fuel.

2. Alice
A sensitive ultraviolet imaging spectrometer used to study atmospheric composition and structure.

3. Ralph
Imaging apparatus used to photograph and map surface details during the encounter.

4. Venetia Burney Student Dust Counter (SDC)
Designed by students at the University of Colorado at Boulder. Measures concentration of dust particles.

5. Long Range Reconnaissance Imager (LORRI)
Camera and telescope apparatus used to take photos of target at longer ranges.

6. Solar Wind Around Pluto (SWAP)
Instrument used to measure solar wind activity in the vicinity of Pluto. Also measures atmospheric escape.

7. Pluto Energetic Particle Spectrometer Science Investigation (PEPSSI)
Directional energetic particle spectrometer. Used to study energetic particles in Pluto's atmosphere.

8. Radio Science Experiment (REX)
Performs radio science experiments on Pluto's

Message from ISCB

Establishing and Managing a Global Student Network

Avinash Shanmugam^{1*}, Geoff Macintyre²

¹ Department of Computational Medicine and Bioinformatics, University of Michigan, Ann Arbor, Michigan, United States of America, ² The Centre for Neural Engineering, University of Melbourne, Parkville, Victoria, Australia

ISCB INTERNATIONAL SOCIETY FOR COMPUTATIONAL BIOLOGY

Overview

The Regional Student Groups (RSG) program is a network of student groups affiliated with the International Society of Computational Biology Student Council. While each RSG is encouraged to act independently and address the local needs of its regional student membership, a significant amount of effort is also invested in coordinating affiliation of these groups with the international student body, which provides long-term direction and facilitates communication between groups. Participating in a global student network provides students with an opportunity to network and connect with others around the globe. By sharing experiences within the network, students gain cultural insights and awareness of regional differences in scientific research and industry. In this article, we provide an overview of the tasks involved in setting-up and managing this global student network for bioinformatics. We also highlight the benefits a global student network offers, in the hope that other fields can use this to create their own global student network.

Ricardo Vidal, M. Eng. 04/11/2014 15:26

Nice paper! Might have pointers related to our advisor program.

The RSG chair to oversee the operation of RSGs in Europe, Asia, and Africa. Together this committee ensures that each RSG is functioning well, facilitates communication between RSGs, and manages all RSG registrations and renewals. The vice-chairs touch base regularly with RSGs, and together the RSG committee develops strategies and initiatives to support the RSGs.

cases, however, these groups do not need to be started from scratch. There will inevitably be a number of groups of students that meet regularly, scattered around the globe, which could benefit from being connected through a larger network. The effort lies in identifying and unifying these groups. The best way to identify if multiple groups are already in existence is to quiz new students at international conferences and meetings. In our experience, Student Council continues to identify established student groups in the field of computational biology that can benefit from being part of the global RSG network. If, however, the network needs to be created from scratch, we recommend starting with a number of "seed" groups. Two or three groups in different locations around the world will provide a good start to forge a new network. In either case, it is important from the outset to have a mechanism to unify the groups. Ideally, affiliation with a larger, established, non-student parent body is a great way to attract groups to be part of the network (in our case, this is the International Society for Computational Biology). The parent body can provide advice (and, potentially, mechanisms for funding) to the groups in the network, and affiliation with this body can provide an element of recognition. As well as a parent body, it is important to have a committee overseeing the operation of RSGs in Europe, Asia, and Africa. Together this committee ensures that each RSG is functioning well, facilitates communication between RSGs, and manages all RSG registrations and renewals. The vice-chairs touch base regularly with RSGs, and together the RSG committee develops strategies and initiatives to support the RSGs.

Mendeley Biological Sciences

Discipline summary
Biology is the study of life. It attempts to understand the structure, function, processes and evolution of living organisms and how they relate to their environment. Modern biology covers a wide variety of fields and is highly interdisciplinary, drawing on advances in areas such as computer science, mathematics, psychology. Because biology is such a broad subject, it is subdivided according to the ...

To the right of the search bar is a magnifying glass icon and a link to 'Advanced search'. Below the search bar, there is a section titled 'How To Choose a Good Scientific Problem' by Uri Alon in Molecular Cell (2009). This section includes a brief abstract: 'Choosing good problems is essential for being a good scientist. But what is a good problem, and how do you choose one? The subject is not usually discussed explicitly within our profession. Scientists are expected to be smart enough to figure it out...'. Below the abstract, there are links to 'Save reference to library' and 'Related research', and a reader count of '54,629 readers'. Another article listed is 'Whitesides' Group: Writing a Paper' by G M Whitesides in Advanced Materials (2004). Its abstract states: 'Insights into conducting research and the writing of scientific papers are given by Prof. Whitesides in this short essay. The manuscript and its guidelines has been circulated within the Whitesides' research group since 1989.' It also includes 'Save reference to library' and 'Related research' links, and a reader count of '31,758 readers'.

Documentos relacionados

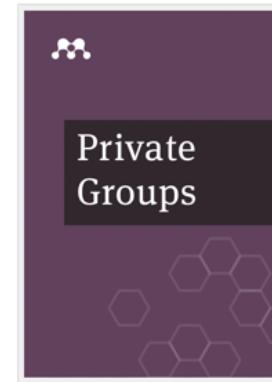

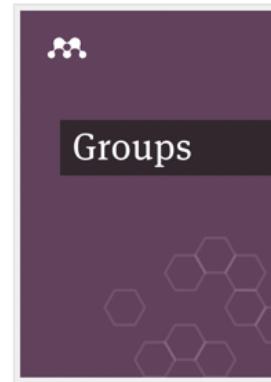

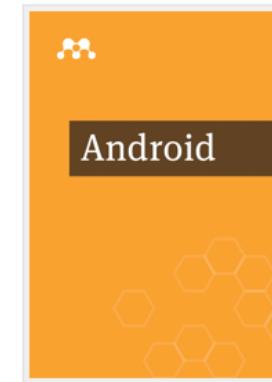

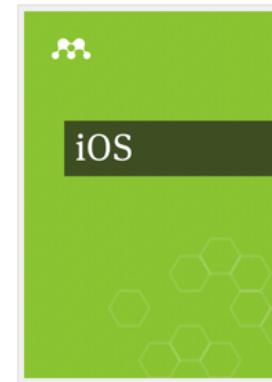

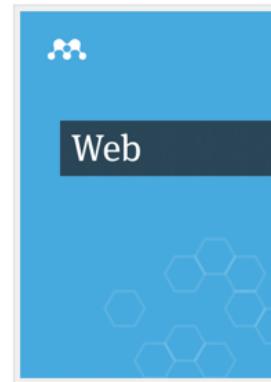

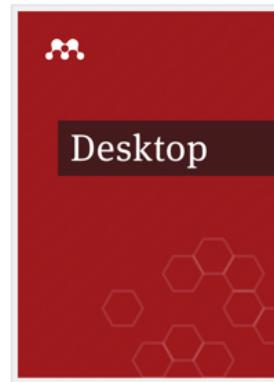

A screenshot of the Mendeley desktop application interface. On the left, there's a sidebar with options like 'All Documents', 'Recently Added', 'Favorites', 'My Publications', 'Unsorted', 'Create Folder...', 'GROUPS', 'Create Group...', and 'TRASH'. The main area shows a table of 'All Documents' with columns for Title, Year, Published In, and Added. One document is selected, and a context menu is open over it. The menu items include 'Related Documents', 'Open File', 'Open File Externally', 'Open Containing Folder', 'Rename Document Files...', 'Merge Documents', 'Mark As', 'Copy As', 'Export...', 'Send by E-mail...', 'Select All', 'Remove from Collection', and 'Delete Documents'. At the bottom of the main window, it says '4 of 15 documents selected'.

1. Seleccionar dos o más artículos
2. Clic 'Related Documents'
3. Recibe recomendaciones personalizadas

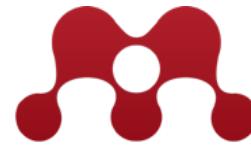

A screenshot of the Mendeley desktop application interface, similar to the one above but showing the results of a search. The sidebar is identical. The main area now shows a list under 'Related Documents' with the heading '10 results based on 4 documents in 'All Documents''. The results list includes various articles with their titles, authors, and publication details. At the bottom, it says 'Related documents.'
